Parcel Section Summaries

Map: Purpose – Map section identifies the general area of the parcel and has no influence on the total number of digits within the Tax Map Number.

Position – The Map is the first part of the number and stands alone, with no dashes or spaces include within it.

Examples – (13, 1, 10, etc.)

Insert: Purpose – The Insert is a secondary identifier and represents a subdivision or smaller region within the map.

Position – Immediately follows the Map section and may be a letter, a number, or a combination. This section can take up to 2 digits/letters.

Format:
• If the Insert is a single character or digits (e.g., C), it will be placed in Index Column 1, followed by a dash (C-).
• If Insert is two characters or digits (e.g., A7), they will occupy Index Columns 1 & 2 with no dashes between them (A7).
• If Insert is blank, then both Index Columns 1 & 2 will be dashes (--).
• OUTLIER – If Insert is a three-digit number (e.g., 33A), it will start at Index Column 1 and occupies Index Columns 1, 2, and 3 (33A).

Double Circle: Purpose – The Double Circle section represents a more specific subdivision or further division within the insert area.

Position – It follows immediately after the Insert. This section can be a single or double digit number and may also be blank.

Format:
• If DB Circle is a single digit (e.g., 6), it will occupy Index Column 4 with a dash in Index Column 3 (-6).
• If DB Circle is a two-digit number (e.g., 10), it will occupy Index Columns 3 & 4 with no dashes (10).
• If DB Circle is blank, both Index Columns 3 & 4 will be dashes (--).

Block: Purpose – The Block section represents a further level of detail, such as a block or area within the subdivision.

Position – The Block follows directly after the Double Circle and can be single, double, or triple digit/letter.

Format:
• If Block is a single digit (e.g., 9) it will be placed in Index Column 6 with dashes in Index Columns 6 & 7 (-9-).
• If Block is two digits (e.g., 12) it will occupy Index Columns 5 & 6 and Index Column 7 will be occupied with a dash (12-).
• If Block is three digits (e.g., 134) it will occupy Index Columns 5, 6, and 7 (134).
• If Block is blank Index Columns 5, 6, and 7 will consist of all dashes (---).

Lot: Purpose- The lot section identifies the specific lot number within a block. It can be 1 to 4 digits.

Position – The Lot section comes after the block section starting at index 8 and following the standard format based on the number of digits
Note – If the Lot number is 4 digits the lot digits will begin in Index Column 7. This has no affect on the Block section as this will maintain it format.

Format:
• If Lot is a one-digit number (e.g., 1), it will occupy Index Column 10 (--8).
• If Lot is a two-digit number (e.g., 12), it will occupy Index Column 9 & 10 (-12).
• If Lot is a three-digit number (e.g., 206), it will occupy Index Column 8, 9, and 10 (206).
• OUTLIER – If Lot is a four-digit number (e.g., 1206), it will start at Index Column 7 and occupies Index Columns 7, 8, 9, and 10 (1206).

Slot: Purpose – The Slot section is an additional identifier placed at the end of the Tax Map Number.

Position – This section is added after the Lot section and can be a single character or multiple characters.

Format:
• There is no special rule for the Slot section as it simply follows immediately after the lot without any dashes unless it specifically is formatted that way. This section does no adhere to any of the Index Columns similar to the Map section of the Tax Map Number.
• It is appended directly to the end of the Lot section.

Examples – (-A, A1, B, etc.)

Zoning Map Book Design

Each page in this book is numbered in the corner with the designated map number. Every visible parcel on each page correlates with the map number within the corner. If there is a number within a parcel that is the lot + slot number/letter assigned to that specific parcel. On page with a map number + insert letter you will find more specific parcels designated within that tax map grid. Parcels with dual colored wavy outlines will distinguish specific double circles/sections and blocks within that specific insert. You will notice uniform coloring of outlines for parcels located within the same double circle/section and block. Different colored wavy outlines are distinguishing another double circle/section and/or block within that specific insert.

Refer to the labeling of the "Double Circle Symbol" and the "Block Symbol" on this page for clarification of the wavy outlines on the insert pages.

Creation of a Tax Map Number

A Tax Map Number is a unique identifier assigned to each parcel of land within the County/Town. The format of this number is structured in specific section that represent different parts of the land identification. The number is built from a series of alphabetical/numerical character, where each section of the map number corresponds to a specific level of the property’s location or division. These sections are ordered in a predetermined way, each with an assigned numbers of columns (or indexes) to accommodate the digits or letters.

General Format of a Tax Map Number is:

Map-Insert-Double Circle-Block-Lot-Slot

Each section (Insert, Double Circle, Block, Lot) may vary in length based on the digits or characters they contain, and blanks in any section are represented by dashes (-).

Using Zoning Maps to Extract a Tax Map Number

Map – Refer to the bottom right corner of page to locate the map number.

Insert – Again refer to the bottom right corner of page to locate the Map number and Insert.

Double Circle – Refer to the wavy outlines and Double Circle Symbol to locate the corresponding number. The wavy outlines will isolate unique sections of land with the Double Circle label and corresponding number for that divided section of land. Sometimes there is no Double Circle Character.

Block – Similar to the DB Circle, again seek out the wavy outlines and locate the square labels within the outlines to find the corresponding Block Number. Sometimes there is no Block Character.

Lot – Find your parcel of interest and within it will be the Lot character for a lot of interest.

Slot - All parcels were label with the Slot appended to the Lot number in the correct format, so this is the same process as finding the Lot number. Just locate your parcel of interest and find the corresponding character label within that parcel.
